

Our Partnership model grew out of a desire to provide a method of visualizing the mountain of data collected daily as more than just individual data points. Instead, we wanted to be able to provide valuable information. Something that can be used to drive decisions with respect to daily operations, system optimization, and the management of multiple systems in a single organization.

Eramosa has been providing engineering and system integration services for over 15 years. During this time we have spent countless hours developing custom reports using tools that were not always designed for that purpose and which were often only capable of reporting on SCADA historical information. Out of necessity to find a better way to address reporting and information processes came the desire to develop a proprietary software solution which has become *e.RIS*. This solution acts as a virtual data warehouse by centralizing the access point instead of the data. *e.RIS* can bring together SCADA historian data with Laboratory Information Management System (LIMS), Computerized Maintenance Management System (CMMS), manual data, and other structured and unstructured data sources without copying the data into a physical data warehouse.

## join our vision for a community-driven partnership

---

Our philosophy has been, and will continue to be, to develop features and functions that our clients require based on their experience with facility operations, maintenance, management, and regulatory requirements. *e.RIS* functionality is driven by our Partners, for our Partners. As a result, we have created two versions of the software: the *community edition* is available for free while the *enterprise edition* contains greater functionality and connectivity. These options provide the flexibility to get started at an entry level or to become full Partners through the *enterprise edition* which includes access to our Partner program.

The Partner program provides an organization with exceptional value and many benefits when using *e.RIS*. The yearly program is included at no cost for the first year following the purchase of *e.RIS enterprise edition*. At the start of each year, Partners can elect to renew their involvement in the program. Partnership fees go towards the development of new functionality, software improvements, support, user conferences, and access to web-based learning sessions. Partners are also involved in setting the course of the software. They help define process improvements and work with our team to test and implement changes to the software. This added functionality is then rolled out to all Partners within the program so that everyone can benefit from these new features.

In addition to the ongoing regular development of new features within the software, Partners can also co-fund the creation of modules specific to their enterprise. This allows functions to be added quickly and cost effectively through a cost-sharing model amongst several Partners.

**We invite you to connect with Eramosa and our current Partners as we jointly develop our enterprise reporting and information system.**
