FOR IMMEDIATE RELEASE  
February 16, 2016

## ERAMOSA RELOCATES LONDON, ON OFFICE

Positive economic outlook for London offers considerable opportunities for growth

Guelph, ON, February 16, 2016 – Eramosa Engineering Inc. will soon have a new home in London, Ontario. The international consulting engineering firm announced today the move to a new, larger office under the leadership of Neil Clarke. The shift will accommodate recent staff growth and maintain its presence in the city.

“With this move we are excited to be able to provide a larger local presence to our clients in London, Chatham-Kent, Windsor, Sarnia and the surrounding areas,” says Tim J. Sutherns, Eramosa president. “We are looking forward to growing our team in Southwestern Ontario over the coming years under Neil’s leadership. This is a great opportunity to expand our municipal, industrial, and energy services as we strategically position this new office between our Guelph and Detroit locations to provide shorter response times to our key clients.”

Effective immediately, Eramosa’s new London address will be 4056 Meadowbrook Drive, Suite 130, London, ON N6L 1E3. The office’s main phone number remains at 519-266-6994.

The move comes at a time when the economic outlook for London could not be brighter. The Ontario Chamber of Commerce recently released their 2016 Ontario Economic Update and the London region ranked high in terms of regional growth performance.

Mr. Clarke will continue to lead the London location. Prior to joining Eramosa in 2014, he participated in system division management, project management, and the implementation of numerous automation

systems over his 23 years of automation experience in the water and wastewater, oil and gas, chemicals, plastics, and food and beverage industries. Since joining Eramosa, his knowledge of the water and wastewater industry has led to the management of multiple projects in the London area.

Our London office is currently involved in a number of exciting projects with the City of London. These include the expansion of the Greenway Pollution Control Centre, upgrades to the Elgin-Middlesex Pumping Station, and construction of a new Southeast Reservoir and Pumping Station to provide additional water storage capacity and water supply. The team also recently completed a field control devices study for the Lake Huron and Elgin area primary water supply systems.

Eramosa maintains a strong commitment to customer service and satisfaction. Our key clients in the London area continue to benefit from the assistance of our full team across all five corporate offices. The London location maintains a local presence that aids in minimizing operational impact, improving support response times, and enhancing project delivery.

#### **About Eramosa Engineering Inc.**

Eramosa is a consulting engineering firm specializing in Supervisory Control and Data Acquisition (SCADA) systems, along with automation, process control, system integration, instrumentation and control, and electrical services. The company is a leading SCADA systems provider within several key markets including water, wastewater, solar, and wind. We also offer networking, programming, information technology, and cyber security strategies for our customers.

Based from our five offices in Guelph, Calgary, Detroit, Toronto and London, we employ over 90 professionals to serve our public and private sector clients across North America.
